Project Development Phase Delivery of Sprint -1

| Team ID | PNT2022TMID31754 |
|--------------|---|
| Project Name | Smart Farmer-IOT Enabled Smart FarmingApplication |

In Sprint-1 we are going to develop the python code and Wokwi Online ESP32 Simulator and connecting to IBM Watson Platform

1. Introduction

The main aim of this project is to help farmers automate their farms by providing them with a Web App through which they can monitor the parameters of the field like Temperature, soil moisture, humidity and etc. And control the equipment like water motor and other devices remotely via internet without their actual presence in the field.

2. Problem Statement

Farmers are to be present at farm for its maintenance irrespective of the weather conditions. They have to ensure that the crops are well watered and the farm status is monitored by them physically. Farmer have to stay most of the time in field in order to get a good yield. In difficult times like in the presence of pandemic also they have to work hard in their fields risking their lives to provide food for the country.

3. Proposed Solution

In order to improve the farmer's working conditions and make them easier, we introduce IoT services to him in which we use cloud services and internet to enable farmer to continue his work remotely via internet. He can monitor the field parameters and control the devices in farm.

4 . Software Requirements

- 1.Python IDLE 3.7.0 (64-Bit)
- 2.IBM Watson Platform
- 3.IBM Node-Red
- 4. MIT App Inventor

First install the python 3.7.0 version idle . Go to command prompt and type python -version we can get version.

After that open python idle we can see python shell.

```
| Be ptden 2.7.5 Net | Street | Street
```

Click on file and open new file the window appear as shown below.

Before writing the python script we have install pip ibmiotf install. After that we have to write the python code.

Python code to connect the IBM Watson platform

```
pythonprogspy. C\Uters\Admin\AppButalLocalPrograms\Pythonprogspy(3.7a)\

CODE:

```
import time
import sys
import ibmiotf.application
import ibmiotf.device
import random
#Provide your IBM Watson Device Credentials
organization = "9lglg1 " deviceType = "
Arduino " deviceId = "1234567" authMethod
= "token" authToken = "123456789 "
  def
myCommandCallback(cmd):
    print("Command received: %s" % cmd.data['command'])
print(cmd)
try:
    deviceOptions = {"org": organization, "type": deviceType,
"id": deviceId, "auth-method": authMethod, "auth-token":
authToken}
    deviceCli = ibmiotf.device.Client(deviceOptions)
    #............
except Exception as e:
    print("Caught exception connecting device: %s" % str(e))
    sys.exit()
```

```
# Connect and send a datapoint "hello" with value "world" into
the cloud as an event of type "greeting" 10 times
deviceCli.connect()
while
True:
       temperature=random.randint(0,100)
humidity=random.randint(0,100)
                                soil=
random.randint(0,100)
        data = {'temperature' : temperature,
'humidity': humidity ,'soil':soil} #print data
def myOnPublishCallback():
           print ("Published Temperature = %s C" % temperature,
"Humidity = %s %%" % humidity, "soil Moisture = %s %%"% soil, "to
IBM Watson")
        success = deviceCli.publishEvent("IoTSensor", "json",
data, qos=0, on publish=myOnPublishCallback) if not
success:
                    print("Not connected to IoTF")
time.sleep(1)
       deviceCli.commandCallback = myCommandCallback
# Disconnect the device and application from the cloud
deviceCli.disconnect()
```

Simulation output in the python idle:
